

Midwest Mechanical is Awarded Another 600,000 square foot Hospital in Arkansas!

Midwest Mechanical Contractors, Inc. has been selected as mechanical contractor for the new 600,000 square foot hospital expansion project at the University of Arkansas Medical Sciences in Little Rock, AR. We have been awarded this project based on our fee and qualification proposal that was submitted in mid-August. ***This award represents our 8th healthcare facility in the State of Arkansas in the last 10 years!*** We are excited about continuing this great tradition of quality healthcare facilities in Arkansas!

The general contractor is CDI Contractors of Little Rock; the architect is HKS and mechanical engineer is Tinsley Mullen. Demolition of the previous structure was completed in February 2006, and work could begin as early January 2007!

We will provide pre-construction and construction services for this project. The pre-construction and early construction services team will be lead by **Owen Withrow** and **Ray Wilson** until such time that the construction team of **Dennis Miller** and **Dick Clear** are available.

Special thanks to **Karen Mills** for her hard work and dedication in the preparation of our response to the Request for Qualification.
